There is an enemy beneath our feet. He recognises no national boundaries, no political parties. Everyone in the world is threatened by him. The enemy is the earth itself. When an earthquake strikes, the world trembles. The power of a quake is greater than anything man himself can produce. If it strikes a modern city, the damage it causes is immense. Whole buildings collapse, bridges fall, dams burst. Gas mains burst, explosions are caused and fires are started. If the quake strikes at sea, huge tidal waves sweep inland. If it strikes mountain ranges, avalanches roar down into the valley.

Today scientists are directing a great deal of their effort into finding some way of combating earthquakes. But they are dealing with forces so immense that man cannot hope to resist them. All that can be done is to try to pinpoint just where the earthquake will strike and work from there. At least some precautionary measures can then be taken to save lives and some of the property.

16. Read the following passage and answer the questions set on it :

No one can be a truly competent lawyer unless he is a cultivated man. If I were you, I would forget all about any technical preparation for the law. The best way to prepare for the law is to come to the study of the law as a well-read person. No less important for a lawyer is the cultivation of the imaginative faculties by reading poetry, seeing great paintings, in the original or in easily available reproductions, and listening to great music. Stock your mind with the deposit of much good reading, and widen and deepen your feelings by experiencing vicariously as much as possible the wonderful mysteries of the universe, and forget all about your future career.
